

Jose G Noriega

jg186@rice.edu | 858.214.9229 | linkedin.com/in/jose-g-noriega | Houston, TX

EDUCATION

RICE UNIVERSITY | B.S. MECHANICAL ENGINEERING 3.76/4.0 GPA

CLASS 2027

SKILLS

Software: SolidWorks, Fusion 360, Inventor, OnShape, Microsoft Office, Altium Designer

Manufacturing: Lathes, mills, CNC routers, 3D printers, laser and plasma cutters, soldering, welding

Programming languages: Java, Python, MATLAB, Arduino

EXPERIENCE

Assembly, Integration, and Test intern | General Atomics — EMS

June 2025 – August 2025 | Huntsville, AL

- Designed and assembled testing equipment to test and mature navigation systems
- Developed an electrical schematic and manufactured a data acquisition system for test equipment
- Executed test plans and utilized test devices to gather data to determine test criteria success

Research and Development Team Member | Rice Robotics Club

August 2023 – Present | Houston, TX

- Designed a 12 DOF quadruped robot in Onshape that jumps over six inches
- Developed a 3D model and assembly of a double four-bar linkage system leg in OnShape
- Developed reverse kinematic equations to allow for accurate motor control
- Fabricated the robot using lathes, mills, and 3D printers to produce a high-fidelity prototype

Aerodynamics Airframe Team Member | Rice Eclipse

August 2023 – May 2025 | Houston, TX

- Utilized SolidWorks to design the spacecraft airframe and optimized fin geometry, nose design, and boattail design to increase expected apogee by 15%
- Modeled an engine coupler in SolidWorks to attach the engine to the airframe and produced technical drawings
- Manufactured the engine coupler utilizing lathes and mills

Undergraduate Researcher | TexLab

March 2025 – Present | Houston, TX

- Designed and fabricated an adaptive exercise harness with integrated sensors for astronauts to facilitate space exercise
- Utilized SolidWorks to design a buckle transducer meant for testing the load distribution of the harness
- Programmed an ESP-32 to gather data from load cells, force sensors, and humidity sensors, optimizing performance, modularity, and comfort

Engineering Design Teaching Assistant | Rice University

August 2024 – Present | Houston, TX

- Mentored engineering design teams developing assistive medical devices, equipment validation systems, etc.
- Facilitated communication between team members and helped manage the project timeline
- Provided technical support in prototyping, circuit design, mechanical design, and manufacturing
- Led prototyping and manufacturing workshops to teach students prototyping techniques and tools

PROJECTS

Automated River Water Sampler

August 2024 – January 2025 | Houston, TX

- Designed a water storage system in SolidWorks, which ensured sampling accuracy of over 95% during testing
- Manufactured the system with 3D printers, Water Jet cutters, and CNC machines
- Made the electrical circuit schematic and PCB design utilizing Altium designer to control the electrical components
- Designed, manufactured, and soldered a waterproof storage container for electrical components
- Programmed an Arduino Mega to control linear actuators, motors, and pumps, which consistently filled vials with 8mL of water
